12 March 1963

MEMORANDUM FOR THE RECORD

25X1A

SUBJECT : [REDACTED] Readout

25X1A

25X1A

At the [REDACTED] Board Meeting on 11 March 1963, [REDACTED] briefed the group on the status of the [REDACTED] system and showed some of the more recent materials. It was mentioned that improved quality products might be obtained using direct film readout of the electron beam as opposed to the present system of using phosphors, etc. Kodak has developed such a system. [REDACTED] will arrange to have [REDACTED] discuss this technique with Kodak and perhaps add work in this area directly to the [REDACTED] program. 25X1A
